The application has been amended as follows:

Claims 1-20 and 30-39 are now cancelled.

***Allowable Subject Matter***

2. Claims 21-29 and 40-44 are allowed. The prior art failed to teach the limitations of detecting when a pause in data delivery is necessary; determining an effect that pauses at specific points in the delivery of data would have on performance of the receiving device; and managing buffering and subsequent delivery of data exclusively over said communication connection on said IP-based network to the receiving device, such that pauses in the data delivery occur at locations that would have a minimal impact on the performance of the receiving device, as recited in claim 21.

The prior art also failed to teach the limitations of providing a transmit buffer for temporary storage of data packets to be sent across a communication connection established on an IP-based communication network; storing in said transmit buffer at least one data packet that is transmitted across said IP-based communication network;

and varying a size of said transmit buffer based on input from at least one of said IP-based communication network and a destination system which is on said communication connection and connected to said IP-based communication network, as recited in claim 40.
